MREŽA HIDROLOŠKIH STANICA (R 1 : 750 000)

## PREDGOVOR

Nakon obnove, u ratu potpuno uništene mreže hidroloških stanica, i uspostavljanja sistemskih hidroloških osmatranja na vodnom području sliva rijeke Save i Jadranskog mora u Federaciji BiH – ovo je peti Hidrološki godišnjak koji se publikuje.

Inače, publikovanje Hidroloških godišnjaka za slivove rijeka na području Bosne i Hercegovine se vrše od, davne, 1919 godine. Od tada, redovno i bez prekida, u okviru raznih državnih zajednica, izdaju se Hidrološki godišnjaci.

Usljed rata, na području Federacije Bosne i Hercegovine u razdoblju 1992-1996 godine, je potpuno devastirana mreža hidroloških stanica. Nakon 1997 godine počelo se raditi na obnovi mreže hidroloških stanica od strane raznih organizacija i korisnika, međutim tek sa aktivnim uključivanjem "Agencije za vodno područje rijeke Save", Sarajevo i "Agencije za vodno područje Jadranskog mora", Mostar, a u suradnji sa Federalnim hidrometeorološkim zavodom - počela je sistemska obnova mreže hidroloških stanica.

Tako, na slijedećem dijagramu je dat prikaz stalnog rasta broja obnovljenih hidroloških stanica, za sliv rijeke Save i Jadranskog mora.

Kao rezultat obnove hidroloških stanica i ponovnih sistemskih hidroloških mjerenja i osmatranja, krenulo se u izradu Hidrološkog godišnjaka za 2001 godinu, dok su u ovom godišnjaku publikovani rezultati sistemskih hidroloških osmatranja iz 2005 godine.

Hidrološki godišnjak koji publikujemo, za 2005 godinu, sadrži prikupljene i obrađene podatke sa mreže hidroloških stanica površinskih voda slivnog područja rijeke Save i slivnog područja Jadranskog mora, za područje Federacije Bosne i Hercegovine.

Također, u 2005. godini je obnovljen čitav niz hidroloških automatskih stanica, koje će, obzirom na kratak period rada i nedovoljno hidrometrijskih mjerenja za formiranje krivulja protoka, biti obrađene u slijedećem "Hidrološkom godišnjaku" - za 2006. godinu.

-

Na hidrološkim i meteorološkim stanicama se sistemski, po utvrđenom programu, osmatraju i registriraju vodostaji, mjere protoke, temperature vode, padavine i temperature zraka.

U Hidrološkom godišnjaku za 2005 godinu se za 50 hidroloških stanica i 23 meteorološke stanice, objavljuju slijedeći podaci:

- Osnovni podaci o hidrološkim i meteorološkim stanicama
- Vodostaji: za 50 stanica
- Protoke: za 39 stanica
- Temperature vode: za 23 stanice
- Padavine: za 22 stanice
- Temperature zraka: za 23 stanice

Ovaj Hidrološki godišnjak je zajedničko djelo Federalnog hidrometeorološkog zavoda, "Agencije za vodno područje rijeke Save", Sarajevo i "Agencije za vodno područje Jadranskog mora", Mostar.

Sarajevo, 2008. godine

## OBJAŠNENJA

### *Spisak vodomjernih stanica sa osnovnim podacima – Tabela 1*

U tabeli je dat spisak i osnovni podaci o svim vodomjernim stanicama čiji podaci su objavljeni u ovom Hidrološkom godišnjaku.

Stanice su razvrstane po hidrografskoj podjeli, to jest po vodotocima i slivovima kojima vodomjerne stanice pripadaju. Redoslijed vodotoka, odnosno slivnih područja je u smjeru od zapada prema istoku. Vodomjerne stanice su poredane u spisku najprije na glavnoj rijeci, u smjeru od izvora prema ušću, a zatim na pritokama čiji je redoslijed također u nizvodnom smjeru.

Podaci u Tabeli 1 se daju odvojeno za 2 glavna slivna područja – vodno područje sliva rijeke Save i vodno područje sliva Jadranskog mora.

Tako, za vodno područje slivova rijeke Save, u ovoj kalendarskoj godini sve stanice, odnosno vodotoci, su razvrstani u sedam slivnih područja i to:

- Sliv rijeke Dunav
- Sliv rijeke Kupe (Korana i Glina)
- Sliv rijeke Une
- Sliv rijeke Vrbas
- Sliv rijeke Bosne
- Direktni sliv Save
- Sliv rijeke Drine

Za vodno područje slivova Jadranskog mora, u ovoj kalendarskoj godini sve stanice, odnosno vodotoci, su razvrstani u dva slivna područja i to:

- Sliv rijeke Cetine (zapadni krš)
- Sliv rijeke Neretve

U tabelarnom spisku su prikazani slijedeći podaci o vodomjernim stanicama:

- Redni broj vodomjerne stanice
- Položaj stanice na vodotoku, odnosno rastojanje stanice od ušća u km
- Površina slivnog područja u km<sup>2</sup>
- Kota "nule" vodomjera
- Tip stanice (osmatrač, limnigraf, automatska)
- Novi početak rada (datum obnove nakon rata)
- Raspoloživi podaci (vodostaji, protoci, temperature vode)

### *Mreža hidroloških stanica - karta*

Na priloženoj karti su prikazani lokaliteti vodomjernih stanica razvrstani u tri grupe i označeni različitim bojama prema opremljenosti stanice - osmatrač, limnigraf, automatska stanica, i granice slivnih površina većih rijeka Bosne i Hercegovine.

- Pod automatskom stanicom se podrazumijeva stanica na kojoj se vrši kontinuirano registriranje vodostaja i drugih parametara sa vremenskom diskretizacijom najčešće jedan sat, i sa mogućnošću teletransmisije podataka telefonskim putem.
- Pod "osmatrač" se podrazumijeva stanica na kojoj osmatrač vrši jednokratna osmatranja vodostaja u jutarnjem terminu i, eventualno, za vrijeme trajanja velikih voda.
- Limnigraf kontinuirano registrira vodostaje – upis na traku.

### *Karakteristični hidrološki parametri za 2005. godinu – Tabela 2*

U tabeli su prikazane karakteristične vrijednosti protoka (srednji, minimalni i maksimalni godišnji protoci) za kalendarsku 2005. godinu, zatim broj snimljenih poprečnih profila, kao i broj izvršenih hidrometrijskih mjerenja protoka.

## VODOSTAJI

U ovom poglavlju se objavljuju dnevni i karakteristični vodostaji rijeka u toku kalendarske 2005. godine - tabele i grafikoni oscilacija vodostaja.

Sve vrijednosti vodostaja su date u centimetrima (cm).

Svakodnevni vodostaji prikazani su kao srednji dnevni vodostaji. Na vodomjernim stanicama gdje se vodostaji čitaju samo jednom dnevno (jutarnji vodostaji) očitane vrijednosti su prikazane kao srednji dnevni vodostaji. Na limnigrafskim stanicama gdje se vrši kontinuirano bilježenje vodostaja - srednji dnevni vodostaji su dobiveni obrađivanjem limnigrafskih traka, a na automatskim stanicama osrednjavanjem satnih vrijednosti vodostaja.

Popunjene i korigovane vrijednosti vodostaja su štampane u kurzivu.

Minimalni, odnosno maksimalni mjesečni vodostaji su prikazani u donjim redovima godišnjaka sa pripadajućim danom pojave.

Karakteristični mjesečni i godišnji vodostaji su prikazani sa slijedećim oznakama:

- NV – minimalni mjesečni, odnosno godišnji vodostaji;
- SV – srednji mjesečni, odnosno godišnji vodostaji;
- VV – maksimalni mjesečni, odnosno godišnji vodostaji;
- SNV – srednji minimalni mjesečni vodostaji;
- SVV – srednji maksimalni mjesečni vodostaji;

## PROTOKE

U ovom poglavlju se objavljuju dnevni i karakteristični protoci rijeka u toku ove kalendarske godine - tabele i grafikoni oscilacija proticaja sa linijom trajanja.

Sve vrijednosti proticaja su date u ( $m^3/s$ ).

Svakodnevni protoci u godišnjacima su prikazani kao srednji dnevni protoci. Ovi protoci dobiveni su preko srednjih dnevnih vodostaja i "krivulje protoka" za 2005. godinu. Na onim hidrometrijskim profilima koji imaju promjenjivo riječno korito proračun srednjih dnevnih proticaja vršen je preko "familije krivulja protoka" za pojedine periode u toku godine.

Minimalni, odnosno maksimalni mjesečni protoci su prikazani u donjim redovima godišnjaka sa pripadajućim danom pojave.

Karakteristični mjesečni i godišnji protoci su prikazani sa slijedećim oznakama:

- NQ – minimalni mjesečni, odnosno godišnji protoci;
- SQ – srednji mjesečni, odnosno godišnji protoci;
- VQ – maksimalni mjesečni, odnosno godišnji protoci;
- SNQ – srednji minimalni mjesečni protoci;
- SVQ – srednji maksimalni mjesečni protoci;

## TEMPERATURE VODE

U ovom poglavlju se objavljuju dnevne i karakteristične temperature vode na rijekama u toku 2005. godine u obliku tabela i grafikona srednjih dnevnih oscilacija temperatura vode.

Svi podaci su dati u Celzijusovim stepenima ( $^{\circ}C$ )

Svakodnevne temperature vode su prikazane kao srednje dnevne temperature vode. Na vodomjernim stanicama gdje se temperature vode čitaju samo jednom dnevno (istovremeno kada i vodostaji) očitane vrijednosti su prikazane kao srednje dnevne temperature vode. Na automatskim stanicama srednje dnevne temperature vode su dobivene osrednjavanjem satnih vrijednosti.

Minimalne, odnosno maksimalne mjesečne temperature vode su prikazane u donjim redovima godišnjaka sa pripadajućim danom pojave.

Karakteristične mjesečne i godišnje temperature vode su prikazane sa slijedećim oznakama:

- NT – minimalne mjesečne, odnosno godišnje temperature vode;
- ST – srednje mjesečne, odnosno godišnje temperature vode;
- VT – maksimalne mjesečne, odnosno godišnje temperature vode;
- SNT – srednje minimalne mjesečne temperature vode;
- SVT – srednje maksimalne mjesečne temperature vode;

## GRAFIKONI OSCILACIJA TEMPERATURA VODE

*M E T E O R O L O G I J A*

## OBJAŠNJENJA

### *Spisak meteoroloških stanica sa osnovnim podacima – Tabela*

U tabeli je dat spisak i osnovni podaci o svim meteorološkim stanicama čiji podaci su objavljeni u ovom Hidrološkom godišnjaku.

Stanice su razvrstane po hidrografskoj podjeli, to jest po slivovima kojima meteorološke stanice pripadaju, odvojeno za vodno područje rijeke Save i vodno područje Jadranskog mora. Redoslijed slivova glavnih vodotoka je od zapada prema istoku, a vodomjerne stanice su poredane u spisku od gornjeg dijela sliva pa nizvodno.

U tabelarnom spisku su prikazani slijedeći podaci o meteorološkim stanicama:

- ✓ Redni broj meteorološke stanice
- ✓ Slivno područje
- ✓ Nadmorska visina
- ✓ Raspoloživi podaci (padavine, temperature zraka)

### *Mreža meteoroloških stanica – karta*

Na priloženoj karti su prikazani lokaliteti meteoroloških stanica razvrstani u dvije grupe i označeni različitim bojama prema tipu stanice – sinoptička i automatska.

- Pod automatskom stanicom se podrazumijeva stanica na kojoj se vrši kontinuirano registriranje temperatura zraka i padavina sa vremenskom diskretizacijom najčešće jedan sat
- Pod sinoptičkom stanicom se podrazumijeva stanica sa ljudskom posadom na kojoj se vrši puni program osmatranja.

## PADAVINE

U ovom poglavlju se objavljuju dnevne količine padavina registriranih na meteorološkim stanicama u toku 2005. godine u obliku tabela dnevnih količina padavina i grafikona mjesečnih suma padavina.

Sve vrijednosti su date u  $l/m^2$ .

Dnevne vrijednosti suma padavina na sinoptičkim stanicama su mjerene u 07 sati i odnose se na prethodna 24 sata (od 07 do 07 sati), dok se dnevne sume padavina na automatskim stanicama odnose na period od 00-24 sata (od 00 do 24 sata).

Na sinoptičkim stanicama, u tabeli dnevnih vrijednosti suma padavina, tačkom je označen dan u kojem nije bilo padavina.

Na automatskim meteorološkim stanicama data je dnevna suma padavina za svaki dan; ako u danu (od 00 – 24 sata) automatska stanica nije registrirala padavine stoji 0.0.

Ako je prostor prazan znači da tog dana nije bilo mjerenja.

## TEMPERATURE ZRAKA

U ovom poglavlju se objavljuju dnevne i karakteristične temperature zraka registrirane na meteorološkim stanicama u toku 2005. godine u obliku tabela i grafikona srednjih dnevnih oscilacija temperatura zraka.

Svi podaci su dati u Celzijusovim stepenima (°C).

Dnevne temperature zraka na automatskim stanicama su prikazane kao srednje dnevne temperature zraka i dobivene su osrednjavanjem satnih vrijednosti temperatura zraka.

Dnevne temperature zraka na sinoptičim stanicama, prikazane kao srednje dnevne temperature zraka, su dobivene iz klimatoloških terminskih osmatranja po jednačini:

$$T_{SR.DN.} = \frac{T_{ZRAKA (U 07 sati)} + T_{ZRAKA (U 14 sati)} + 2 * T_{ZRAKA (U 21 sat)}}{4}$$

Minimalne, odnosno maksimalne mjesečne temperature zraka su prikazane u donjim redovima godišnjaka sa pripadajućim datumom pojave.

Karakteristične mjesečne i godišnje temperature zraka su prikazane sa slijedećim oznakama:

NT – minimalne mjesečne, odnosno godišnje temperature zraka;

ST – srednje mjesečne, odnosno godišnje temperature zraka;

VT – maksimalne mjesečne, odnosno godišnje temperature zraka;

SNT – srednje minimalne mjesečne temperature zraka;

SVT – srednje maksimalne mjesečne temperature zraka;
